- d) .. agent

9. .. A young..... is a person who commits a crime but is under 18-years-old and often subject to more lenient laws because of his/her age. However, sometimes they are charged as adults depending on the severity of the crimes.

- a) .. novice
- b) .. offender
- c) .. orphan
- d) .. tutor

10. A.....is a person who illegally and secretly transports illegal drugs or other items that violate local or national laws.

- a) .. stripper
- b) .. prostitute
- c) .. barista

d) .. smuggler

11. Someone who smuggles and sells illegal drugs is called a drug.....

a) .. rapist

b) .. trafficker

c) .. shoplifter

d) .. mugger

12. Someone who sells sex and sexual favors for money is called a.....

a) .. arsonist

b) .. fraud

c) .. prospector

d) .. prostitute

13. Someone who is a teenager (under 18 years of age) and has been in trouble with the law multiple times is called adelinquent.

a) .. senior

b) .. infantile

c) .. juvenile

d) .. embezzling

14. Someone who lights fires on purpose is called an.....

a) .. mugger

b) .. smuggler

c) .. blackmailer

d) .. arsonist

15. Someone who attempts to siphon off and steal money from a company over time is called an.....

a) .. arsonist

b) .. embezzler

c) .. rapist

d) .. murderer

16. People guilty of murdering multiple people over time are calledkillers.

a) .. parallel

b) .. serial

c) .. repetitive

d) .. disorder

17. People involved in organized crime, drugs, and violence are sometimes known as.....

a) .. peddlers

b) .. muggers

c) .. gangsters

d) .. shoplifters

18. Men or women who manage prostitutes and arrange sexual encounters for them in return for money are called.....

a) .. pimps

b) .. druglords

c) .. arsonists

d) .. stalkers

19. The leader of the mafia, a large gang focused on organized crime, is called a mafia

a) .. king

b) .. president

c) .. boss

d) .. chairman

20. A person who steals other people's belongings is a

a) .. serialkiller

b) .. arsonist

c) .. thief

d) .. rapist

Test №8

1. .. Sometimes, we call people, who are violent and are ready for hire,.....

a) .. arsonists

b) .. rapists

c) .. burglars

d) .. thugs

2. .. Adults who are guilty of sexually abusing children are known as.....

a) .. pedophiles

b) .. robbers

c) .. thugs

d) .. juvenile delinquents

3. .. A.....is someone who follows a person around, sends them unwanted letters, emails, and/or telephone calls, and/or watches someone without consent.

a) .. robber

b) .. stalker

c) .. pedophile

d) .. arsonist

4. .. Someone who tries to deceive another by misrepresenting him or herself is a.....

a) .. murderer

b) .. drugtrafficker

c) .. smuggler

d) .. fraud

5. .. Someone who tries to trick people by exploiting their confidence or deceiving them is called a You could even call these people frauds.

a) .. con artist

b) .. arsonist

c) .. poacher

d) .. bookie

6. .. A person who hunts animals but is not permitted to do so by law is called a.....

a) .. rapist

b) .. mugger

c) .. poacher

d) .. thug

7. .. A person who threatens to expose private or embarrassing information about someone unless he or she receives money from that person is called a.....

a) .. blackmarketeer

b) .. thief

c) .. blackmailer

d) .. embezzler

8. .. Someone who is convicted multiple times for committing the same or similar crimes is called a offender.

a) .. replay

b) .. redo

c) .. copy

d) .. repeat

9. .. Someone who tries to imitate another's criminal act is called a.....

a) .. mime

b) .. copycat

c) .. actor

d) .. duplicator

10. An Internet tries to take advantage of Internet users for monetary or sexual purposes.

a) .. hunter

b) .. predator

c) .. poacher

d) .. mugger

2.1.2 Задания практической части

Unit 1.

Lead-in

I. Match the following Russian words with their English equivalents. Write down the transcription of those which are difficult to read.

фармакопейная статья	- medicine, drug, preparation
плотность	- sulfate ash
растворимость	- reagent
раствор	- pharmacopoeical monograph
спирт	- ignition
диэтиловый эфир	- waterbath
лекарственный препарат	- density
объемный процент	- weighing
крепость раствора	- purity
подлинность	- solubility
чистота	- dry substance
взвешивание	- dropper
высушивание	- alcohol content
сульфатная зола	- drying
прокаливание	-
пах-	solvent to test in the absence of
	originality
	каплемер
	- solution
содержание спирта	- absence of odour
сухое вещество	- alcohol
реактив	- diethyl ether
	- volume percent
	- strength of solution

Reading

II. Divide the text into several pieces. Entitle them, using the following headings.

1. Molecular mass
2. Temperature
3. Exact weighing
4. Odour
5. Constant mass
6. Dropper
7. Solvents

The rules of text interpretation in Pharmacopoeia.

If temperature is a matter of importance while defining density, solubility etc., but it is not indicated, one should take it as 20 °C. The terms “cold”, “cool” correspond to the t⁰ range of 12⁰ – 15⁰ C. The term “warm” corresponds to the t⁰ range of 40⁰ – 50⁰ C, the term “hot” corresponds to the t⁰ range of 80⁰-90⁰C, the term “room temperature” corresponds to the t⁰ range of 18⁰ – 20⁰C. The term “water-bath” corresponds to the t⁰ range of 98⁰–100⁰C.

When solvent is not specified for the solution, then aqueous solution is meant. The term “water”, if not otherwise indicated, means purified water prepared by distillation. The term “alcohol” without qualification means ethanol. The term ether is used for diethyl ether. When the alcohol content is defined in preparations the term “percent” is used for the volume percent of alcohol.

The molecular masses of compounds described in Pharmacopoeia are calculated according to the table of relative atomic masses adopted in 1975 by International Union of Pure and Applied Chemistry (IUPAC) and based on the carbon scale 12. If the molecular mass is under (or less than) 400 bring two decimal points if it is above (or over) 400 – one decimal point.

Weighing on analytical balance to within 0,0002 g means exact weighing.

If the exact weighing is not indicated, it should be taken to within 0.01 g.

The term “constant mass” is applied to the definition of weight losses in the process of drying or when defining the sulfate ash. It means that the difference in mass between the two weighings doesn't exceed 0.0005 g. The second weighing is made after the additional 1-hour period of drying or ignition.

Test on the absence of odour in the preparation is carried out immediately after opening the package 1-2 g. of preparation are distributed equally on the watch glass. 6-8 cm diameter and in 2 min one should smell the odour at the distance of 4-6 cm from the watch glass.

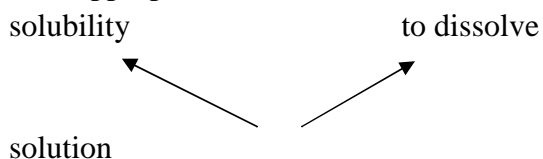

The dropper should be used to count drops. It gives twenty drops in 1 ml at 20⁰C.

Vocabulary practice

II. Read the text again and say whether the following statements are true or false. Use such expressions as:

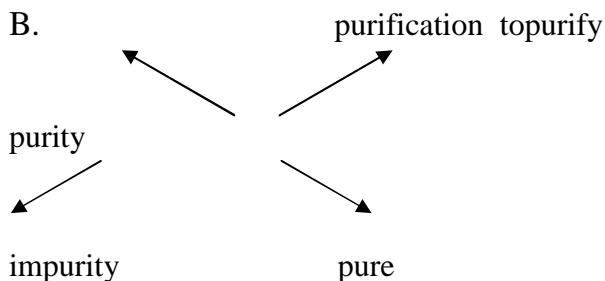

1. The terms “cold”, “cool” correspond to the t⁰ range of 12⁰-15⁰C.
2. When solvent is not specified for the solution, then aled col is meant.
3. If the molecular mass is under 400, bring you should bring one decimal point.
4. Weighing on analytical balance to within 0,0002 is called exact weighing.
5. While defining the weight losses, the second weighing is made immediately after the first one.
6. Test on the absence of odour is carried out 2 hours after opening the package.
7. The dropper is used count drops.

IV. Find out the Russian equivalents of the following English derivatives. Complete these sentences with an appropriate derivative.

1. Water is an excellent...
2. Most of the substances are ... in water.
3. ... may be defined as a homogeneous mixture of one or more substances.
4. ... is one of the chemical properties of a substance.
5. If we ... some of the hydrochloric acid gas in water, the solution has a sour taste.

1. All plants and factories must have the system of ... of industrial wastes.
2. ... water can be prepared by distillation, filtration or boiling.
3. ... water prepared by distillation is often used as a solvent.
4. Natural waters have different...
5. Providing ... of water pools in our country is one of the most important ecological problems.

V. Match the words in the left column with the suitable words in the right column and explain in English the meaning of these word combinations.

<u>Model:</u> <u>Alcohol</u>	is a chemical <u>substance</u>	often used as a solvent.
Dropper		Property
Purified		Device
Density		Parametre
<u>Alcohol</u>		Mixture
Weighing		Characteristics
Solution		<u>Substance</u>
Temperature		Process

Unit 2

Lead-in

- I. Match the following Russian words with their English equivalents. Make sure you read them correctly.

порошок

- drastic substance

твердая лекарственная форма	- storage
	-
	ingredient внутренн
ее наружное применение	bulky измельченное
вещество	- property
ингредиент	- naked eye
невооруженный глаз	- powder
ядовитые вещества	- reduced substance
внешнее воздействие	- medicated solid
хранение	- period of validity
свойство	- oral and external administration
смесь	- poisonous substances
объемный, сыпучий	- external influence
однородный	- mix
(mixture) сильнодействующее вещество	-
homogeneous срок годности лекарства	

Reading

II. Divide the text into several parts and entitle them.

Powders

Powders are medicated solids for oral and external administration, consisting of one or more reduced substances, bulky in properties.

Powders are divided into simple, consisting of only one substance and complicated, consisting of two or more ingredients. They are presented as single-dose and multidose preparations. Powders should be homogeneous upon examination by naked eye and have particles not more than 0,160 mm, if there aren't any other requirements in particular monographs.

Complicated powders are prepared with reference to the amounts and properties of ingredients. With the presence of ingredients in different amounts, mixing is carried out beginning with the substances in less amounts and gradually adding other ingredients.

Poisonous and drastic substances in amounts not less than 0,05 g of total mass are used in the form of triturations – mixed with milk, sugar or other excipients (added substance), admitted for medical use (1:100 or 1:10).

Store in a package protected from any external influences and provide stability of the preparation during the determined period of validity, in a dry, and if it is required, in a cool place, protected from light.

Vocabulary practice.

III. Read the text again and replace the underlined words with the words below, close by meaning.

Ingredients, admitted, medicated solids, excipients, influence, are divided into, in the form, with reference to, containing.

1. Powders are medical preparations for oral and external administration.

2. Powders are distinguished as simple, consisting of one substance and complicated, containing of two or more ingredients.
3. Complicated powders are prepared according to the amounts and properties of their components.
4. Poisonous and drastic substances are used in the way of trituration mixes with milk, sugar or other added substances, allowed for medical use.
5. Store in a package, protected from the external effects.

IV. Prove to your group mates that the following statements are true or false. Use such expressions as: “exactly so”, “Yes, indeed”, “on the contrary”, “I’m afraid”, “you are mistaken”, “as far as I know”, “to my mind”.

- a) Ointments are medicated solids
- b) Powders are divided into simple and complicated ones
- c) Powders are presented as single-dose and multidose preparations
- d) Alcoloids should be homogeneous on examination by naked eye
- e) Powders should be stored in hermetical orange-glass bottles with a metal foil put under the cork
- f) Poisonous and drastic substances are used in the form of liquids.

V. Combine the following words into synonymic pairs: complicated, consist, component, substance, demand, amount, quality, ingredient, complex, matter, quantity, contain, requirement, property.

VI. Compose sentences, using the following words and word combinations.

by naked eye (невооруженным глазом), with reference to (относительно), properties (свойства), drastic (измельченный), external influence (внешнее воздействие), period of validity (срок годности).

1. Poisonous and... substance are used in the form of trituration.
2. Store in a package protected from many...
3. Powders should be homogeneous upon examination...
4. Complicated powders are prepared ... the amounts and ... of ingredients.
5. Powders should be stored in a cool place during the...

Unit 3

Lead-in

Match the following Russian words with their English equivalents. Practice reading the words and memorize them.

Гранула	-chew
Твердое вещество	-storage
Прием (лекарств), назначение	-granule
Глотать	-coated granules
Жевать	-excipient
Растворять в воде	-gastric fluid
Жидкость	-air light container
Составная часть лекарства	-liquid
Красящее вещество	-solid

Шипучий	-swallow
Быть предназначенным для...	-intestinal fluid
В оболочке	-gastro-resistant granules
Ингибиторы желудочного сока (или катализаторы кишечного сока)	-to be intended for

Желудочный сок	-administration
Кишечный сок	-colouring matter
Хранение	-dissolve or disperse in water
Герметический контейнер	-

effervescent Reading

Divide the text into several pieces. Entitle them, using the following headings.

Dosage and packing Storage Compo

sition

Description and properties Types of granules

Granules.

Granules are preparations consisting of solid, dry aggregates of powder particles sufficiently resistant to withstand handling. They are intended for oral administration. Some are swallowed, some are chewed and some are dissolved or dispersed in water or another suitable liquid.

Granules contain one or more active substances with or without excipients and, if necessary, colouring matter and flavoring substances.

Granules are presented as single-dose or multidose preparations. Each dose of a multidose preparation is administered by means of a device suitable for measuring the quantity prescribed. For single-dose granules, each dose is enclosed in an individual container, for example as a sachet, a paper packet or a vial.

Several categories of granules may be distinguished:

- 1) effervescent granules
- 2) coated granules
- 3) gastro-resistant granules
- 4) modified-release granules

Effervescent granules are uncoated granules generally containing acid substances and carbonates which react rapidly in the presence of water to release carbon dioxide. They are intended to be dissolved or dispersed in water before administration.

Coated granules are usually multidose preparations and consist of granules coated with one or more layers of mixtures of various excipients.

Gastro-

resistant granules are intended to resist the gastric fluid and to release the active substances in the intestinal fluid. These properties are achieved by covering the granules with a gastro-resistant material or by other suitable means.

Modified-release granules are coated or uncoated granules containing special excipients, separately or together. They are designed to modify the rate, the place and the time at which the active substance is released. Modified-release granules include prolonged-release granules and delayed-release granules.

Store in a well-closed container or in an airtight container. Vocabulary practice

III. Read the text again and finish up the following sentences.

1. Granules are...
2. They are intended for...
3. Granules contain...
4. Effervescent granules are intended to be ...
5. Store in a...
6. Granules are presented as...

Reading

II. Divide the text into several parts. For each part choose the right heading from the list below.

1. Composition.
2. Packing.
3. Description and properties.
4. Usage.

Patches

Patches are flexible pharmaceutical preparations of varying sizes, containing one or more active substances. They are intended to be applied to the skin. They make active substances pass through the skin and circulate in the organism.

Patches normally consist of active substances and an outer covering supporting the preparation. Patches are covered by a protective liner, which is removed before applying a patch to the skin. The protective liner generally consists of a sheet of plastic or metal material. When removed, the protective liner does not detach the preparation. The outer covering is a backing sheet impermeable to the active substance and to the water, designed to support and protect the preparation. The outer covering may have the same dimensions as the preparation or it may be larger. In the latter case the overlapping border of the outer covering is covered by pressure-sensitive adhesive substances which assure the adhesion of the patch to the skin. The preparation contains the active substance together with excipients intended to modify the rate and to enhance transdermal absorption. It may be a single layer or multilayer solid or semi-solid matrix (вещество).

The patch adheres firmly to the skin by gentle pressure of hands or the fingers and can be peeled off without causing appreciable injury to the skin. The patch must not be irritant or painful to the skin after repeated applications.

Patches are normally enclosed in sealed sachets individually. Vocabulary practice

III. Read the text again and prove to your group mates that the following statements are true or false.

e.

1. Patches are volatile pharmaceutical preparations.
2. They are of one and the same size and contain only one active substance.
3. Patches are intended to be applied to the skin.
4. The outer covering is a sheet permeable to the water, designed to support and protect the preparation.
5. The outer covering is of the same dimensions as the preparation.
6. The protection liner does not consist of a sheet of plastic.
7. The patch may be irritant to the skin after repeated applications.
8. Patches are enclosed in sealed sachets.

IV. Write out of the text as many words with the same root as possible. Translate the sentences into

o English using these words in place of the underlined.

to adhere... to cover... to

protect... to apply... to adsorb...

1. Пластырь плотно прилипает к коже.

2. Наружный слой пластыря содержит адрозивные вещества. 3. Специальное покрытие обеспечивает прилипание пластыря к коже. 4. Наружное покрытие пластыря – это поддерживающий слой,

непроницаемый для активных веществ виводы.

5. Пластыри покрыты защитным слоем, который уделяется перед положением пластыря на кожу.

6. Наружный слой пластыря должен поддерживать защищать препарат.

7. Пластырь не должен вызывать раздражения на коже после повторных применений.

8. Пластыри разных размеров применяются для лечения кожных травм (injuries).

9. Специально добавленные вещества предназначены для усиления трансдермического поглощения.

10. Наружный слой пластыря не должен впитывать влагу.

V. Replace the underlined words with the appropriate synonym from the list below. hurting, injurious; take off; change, increase; provide; bear; penetrate; size.

1. The protective liner is removed before applying to support the preparation.

2. The outer covering is a backing sheet designed to support the preparation.

3. Adhesive substances assure the adhesion of the patch to the skin.

4. The patch must not be irritant or painful to the skin.

5. Patches make active substances pass é through the skin and circulate in the organism.

6. The outer covering may have the same dimensions as the preparation.

7. The preparation contains the active substances intended to madly the rate and to enhance transdermal absorption.

VI. Fill each gap in this text with one suitable word: excipients; sachets; pharmaceutical preparations, active substances; irritant or painful; outer covering; protective liner.

1. Patches are flexible... of varying sizes, containing one or more...

2. ... consist of active substances and an outer covering.

3. Patches are covered by a...

4. ... is a backing sheet... to the active substance and to the water.

5. The preparation contains the active substances together with...

6. The patch must not be... to the skin.

7. Patches are normally enclosed in sealed... individually.

Unit 5

Lead-in

I. Match the Russian words with their English equivalents. Read and memorize them.

загрязнение	-	liquid
количество, объем	-	parenteral

Waterforinjections

Waterforinjectionsisaclear,colorless,andtastelessliquid.Itisthewater

for preparing medicines for parenteral administration and for dissolving or diluting substances.

Waterforinjectionsisobtainedfromthewaterintendedforhumanconsumption or from purified water by distillation, by exchange or by any othersuitablemethod.Duringtheproductionandsubsequentstorage,appropriatemeasuresaretakentoensur ethatthetotalamountofwaterisadequatelycontrolled.

Under normal conditions the total count of microorganisms is set as 10 per100mlwhendeterminedbymembranefiltration.

Waterforinjectionsisstoredanddistributedinconditions designedtopreventthegrowthofmicroorganismsandtoavoidanyothercontamination.

Vocabularypractice.

III. Readthetextagainandcompletethefollowingtablewiththecorresponding nouns and verbs. Translate the sentences into English using these words in place of the underlined.

Noun	Verb
Production	...
...	To filter
Injection	...
...	To distill
Administration	...
...	To consume

1. Водудляинъекцийполучают _____ изводы,предназначеннойдляобщественногопотребления.
2. Производствоводы для инъекций включает в себя такие процессыкакфильтрацияидистилляция.
3. Инъекцииназначаютвнутривенно.
4. Этотэлектрoприборпотребляетмногоэнергии.
5. Этамазьпредназначенадлянаружногоприменения.

6. Для приготовления лекарств используют фильтрованную _____
и дистиллированную воду.

7. Пациенту следует вводить инъекции 3 раза в день.

IV. Read the text again and finish up the following sentences.

1. Water for injections is the water for...

2. Water for injections is obtained from...

3. It is the water for preparing ...

4. Appropriate measures should be taken to...

5. Water for injections is stored and distributed in ...

V. Replace the underlined words with the words below, close by meaning. number, volume, to suppose, to produce, necessary, to provide, to state, properly, to use for, to exclude.

1. Water for injections is obtained from the water intended for human consumption.

2. During the production and subsequent storage appropriate measures are taken to ensure that the total amount of water is adequate.

3. Under normal conditions the total count of microorganisms is set as 10 per 100ml when determined by membrane filtration.

4. Water for injections is stored and distributed in conditions designed to prevent the growth of microorganisms and to avoid any other contamination.

VI. Prove that these sentences are right. If it is not so, correct them.

1. Water for injections is liquid which have colour and taste.

2. It is the water for preparing medicines for parenteral administration.

3. Water is obtained from the water intended for human consumption.

4. The total count of alcohol is set as 10 per 100ml.

5. Granules are stored in conditions designed to prevent the growth of microorganisms.

Follow-up (Control check)

I. Choose the correct answer. Put the letter A, B or C in each gap that you choose. Test 1.

1. Oxygen is slightly... in water.

A. dissolves. B. soluble. C. mixing.

2. Natural waters are usually...

A. purify. B. purity. C. impure.

3. The drug should be stored in a place, ... from light.

A. protected. B. excluded. C. protection.

4. Powders are ... with reference to the amounts and properties of their ingredients.

A. preparations. B. prepared. C. consist.

5. Vaccines increase the human body's ... to infectious diseases.

A. resisting. B. resistibility. C. resist.

6. ... granules are usually multidose preparations.

A. coating. B. coated. C. covered

7. Powders are ... into simple and complicated ones.

A. consisted. B. containing. C. divided.

8. Granules are intended for ... administration.

A. external.B. parenteral.C. oral.

Test2.

1. Patchesare...byaprotectiveliner.

Оценивание каждого задания:

Действия	Оценка
Обучающийся выполнил задачу в полном объеме, т.е. формулы применены правильно, расчет выполнен без арифметических ошибок, сделаны правильные выводы по результатам решения задачи.	5
Обучающийся верно применил формулы, но неверно рассчитал показатели (арифметические ошибки), сделаны правильные выводы по результатам решения задачи.	4
Обучающийся не верно применил формулы, расчет выполнен без арифметических ошибок, сделаны правильные выводы по результатам решения задачи.	3
Обучающийся не верно применил формулы, расчет выполнен с арифметическими ошибками, сделаны не правильные выводы по результатам решения задачи или отсутствует решение	2

2.2.1 Вопросы для подготовки к экзамену по дисциплине ОГСЭ.03 Иностранный язык

Примерный перечень вопросов к экзамену:

Задание #1

Вопрос: The main function of the muscular system is ...

Выберите один из 5 вариантов ответа:

- 1) to move us about.
- 2) to regulate a large number of activities.
- 3) to receive and communicate information.
- 4) to convey oxygen to the lungs.
- 5) to carry oxygen and special substances.

Задание #2

Вопрос: A Pharmacopoeia is ...

Выберите один из 7 вариантов ответа:

- 1) the science, dealing with the structure, functions and classification of drugs.
- 2) the science, dealing with the medicinal substances, the art of compounding and dispensing them.
- 3) the place where medicines are compounded, dispensed and sold.
- 4) a book containing a list of medicinal substances with formulas for their preparation.
- 5) the science, dealing with the matter in general, especially its relation to energy.
- 6) the science, dealing with history, source, cultivation, collection, preparation, distribution, composition, purity and preservation of drugs of vegetable and animal origin.
- 7) the science of drugs.

Задание #3

Вопрос:

The first stage of digestion takes place inwhere the salivary enzyme ptyalin initiates digestion of carbohydrates.

Выберите один из 5 вариантов ответа:

- 1) the mouth
- 2) the esophagus
- 3) the stomach
- 4) the large intestine
- 5) the small intestine

Задание #4

Вопрос: The red blood cells contain a pigment called ... which gives the blood its red colour.

Выберите один из 5 вариантов ответа:

- 1) haemoglobin
- 2) blood clotting
- 3) thrombocyte
- 4) leucocyte
- 5) platelet

Задание #5

Вопрос: It is dangerous...

Выберите один из 4 вариантов ответа:

- 1) not to take a tablet three times a day.
- 2) to take medicine in time.
- 3) to wear a mask.

4) not to wash hands you go after an infectious patient.

Задание #6

Вопрос: Shake the bottle with the mixture...

Выберите один из 3 вариантов ответа:

- 1) before use.
